

## Swing Carriages

Swing Carriage - The load capacity of a lift truck jib has a maximum of about 1935 pounds to 6000 pounds on either the extended or retracted positions range. You may have to check with a material handling specialist concerning the particular restrictions of your forklift use. The load capacity ratings are really for the jib itself and not the forklift or even the maximum load that could be handled safely using a particular lift truck. It is very important keep in mind that every time whichever accessories like a forklift jib are fitted to the forklift, the new center of gravity created by the attachment will reduce the overall lift capability of the forklift. There are instructions accessible that provide information on the way to correctly estimate these load limits.

Prior to using whatever lift truck jib, make sure that the hooks and shackles are properly secured to the forklift. Be sure and also double check that the pins are tight. It is imperative that the load calculations are correctly made and double checked. Keep in mind to take into consideration the truth that rated capacities at times lessen whenever the boom is in a raised position, each time the boom is fully extended with telehandlers or even when the mast is slanted forward.

Essential suggestions when utilizing an adjustable jib is not to ever pull a load using this particular kind of accessory. These types of accessories are actually just designed for vertical lifting. Moreover, avoid letting the load sway. Utilize extreme caution each time a load is carried in order to avoid tipping over the truck.
